DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 6 and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 6 recites a weight ratio of three components a, b, and c as a:b:c = "10 to 40:50 to 80:5 to 30". This ratio format is very confusing. If the ratio is meant to be a:b:c = 10:40:50 to 80:5:30, then appropriate corrections are required. Claim 8 recites a method of processing a textile without any specific process steps. The recited method is, therefore, indefinite.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Oharu et al. (JP 2001-107031 A).
5. Regarding the limitations set forth in these claims, Oharu et al. teaches an aqueous water- and oil-repellent dispersion [0001] comprising (A) a copolymer

Art Unit: 1796

comprising perfluoroalkyl ethyl acrylate, dioctyl maleate and acrylamide, and (B) three nonionic surfactants, two of which are PPO/PEO block copolymers having HLB values of 4 and 17 and the third surfactant is a polyoxyethylene oleyl ether with an HLB value of 16.2 [0062]. The surfactants are employed during the emulsion polymerization of the fluorine-containing copolymer. The amounts of the surfactants, in order of increasing HLB values, are 4.8 g, 8.4 g, and 2.4 g. Since no ionic surfactants are employed in the embodiment, those amounts read on claims 3-6. The prior art also teaches a method of processing a material using the disclosed dispersion, wherein the method includes coating methods and the material includes fiber, fiber textile, fiber knitting [0060-0061].
